

# [ON-LINE TRANSMITTING IMAGE CAPTURING DEVICE]

## Abstract of Disclosure

An image capturing device electrically connected to a servicing station, which is connected to a network. When the image capturing receives a start signal, the image capturing device starts to generate image data. After the image capturing generates image data, the image data is transmitted to the servicing station, and then the servicing station automatically transmits the image data to an on-line user client via the network according to an on-line user list.
